Fig. 1. Schematic diagram of the device for measuring the resistance of the material.

The device for measuring the resistance of the material is shown in Fig. 1. It consists of a diamond-shaped component 1, a central circular feature 2, and a small circular feature 3. The diamond-shaped component 1 is made of a material with a high resistance to deformation. The central circular feature 2 is made of a material with a low resistance to deformation. The small circular feature 3 is made of a material with a high resistance to deformation. The device is used to measure the resistance of the material by applying a force to the central circular feature 2 and measuring the displacement of the small circular feature 3.

## FINANCIAL SUPERVISION: MONITORING THE IMPLEMENTATION OF LEGAL REQUIREMENTS

by Gita D. Sengupta

Financial supervision is a process by which the government monitors the financial activities of financial institutions. It is a process by which the government ensures that financial institutions are acting in the best interests of their customers and that they are complying with the law. Financial supervision is a process by which the government ensures that financial institutions are acting in the best interests of their customers and that they are complying with the law.

## PROGRAMME OF FLIGHT ABOUT THE COUNTRY

**FLIGHTS TO BE MADE BY THE CLUB'S AIRCRAFT**

**Monday, 15th Jan. 1938**  
The first flight of the season was made on Monday, 15th Jan. 1938, by the Club's aircraft, piloted by Mr. J. H. D. ...

**Tuesday, 16th Jan. 1938**  
On Tuesday, 16th Jan. 1938, the Club's aircraft was flown by Mr. J. H. D. ...

**Wednesday, 17th Jan. 1938**  
On Wednesday, 17th Jan. 1938, the Club's aircraft was flown by Mr. J. H. D. ...

**Thursday, 18th Jan. 1938**  
On Thursday, 18th Jan. 1938, the Club's aircraft was flown by Mr. J. H. D. ...

# AVIATION NEWS OF THE WEEK

May 21, 1921, Monday

The first of the week's news is the report from the War Department that the new biplane, the Vought-Sikorsky, has been ordered by the War Department for the purpose of testing it for the purpose of determining its suitability for service in the United States Army.

The second item of news is the report from the War Department that the new biplane, the Vought-Sikorsky, has been ordered by the War Department for the purpose of testing it for the purpose of determining its suitability for service in the United States Army.

The third item of news is the report from the War Department that the new biplane, the Vought-Sikorsky, has been ordered by the War Department for the purpose of testing it for the purpose of determining its suitability for service in the United States Army.

The fourth item of news is the report from the War Department that the new biplane, the Vought-Sikorsky, has been ordered by the War Department for the purpose of testing it for the purpose of determining its suitability for service in the United States Army.

The fifth item of news is the report from the War Department that the new biplane, the Vought-Sikorsky, has been ordered by the War Department for the purpose of testing it for the purpose of determining its suitability for service in the United States Army.

The sixth item of news is the report from the War Department that the new biplane, the Vought-Sikorsky, has been ordered by the War Department for the purpose of testing it for the purpose of determining its suitability for service in the United States Army.

The seventh item of news is the report from the War Department that the new biplane, the Vought-Sikorsky, has been ordered by the War Department for the purpose of testing it for the purpose of determining its suitability for service in the United States Army.

The eighth item of news is the report from the War Department that the new biplane, the Vought-Sikorsky, has been ordered by the War Department for the purpose of testing it for the purpose of determining its suitability for service in the United States Army.

The ninth item of news is the report from the War Department that the new biplane, the Vought-Sikorsky, has been ordered by the War Department for the purpose of testing it for the purpose of determining its suitability for service in the United States Army.

The tenth item of news is the report from the War Department that the new biplane, the Vought-Sikorsky, has been ordered by the War Department for the purpose of testing it for the purpose of determining its suitability for service in the United States Army.

The new biplane, the Vought-Sikorsky, is shown in flight over the hangar at the War Department.

These balloons, built of strong canvas for 24 ft and 30 ft diameters, are made of American material, and are made in the United States. They are made in the United States, and are made in the United States.

### RESEARCH REPORT

The first of the two studies was a laboratory experiment. The second was a field experiment. The first study was designed to test the hypothesis that the presence of a social norm would lead to a higher level of compliance. The second study was designed to test the hypothesis that the presence of a social norm would lead to a higher level of compliance.

### STUDY 1: LABORATORY EXPERIMENT

The first study was a laboratory experiment. The second was a field experiment. The first study was designed to test the hypothesis that the presence of a social norm would lead to a higher level of compliance. The second study was designed to test the hypothesis that the presence of a social norm would lead to a higher level of compliance.

The results of the first study are shown in Figure 1. The graph shows a positive linear relationship between the presence of a social norm and the level of compliance. The x-axis is labeled 'Social Norm' and the y-axis is labeled 'Compliance'. The graph shows a positive linear relationship, with a line starting at the origin and extending upwards to the right.

The results of the first study are shown in Figure 1. The graph shows a positive linear relationship between the presence of a social norm and the level of compliance. The x-axis is labeled 'Social Norm' and the y-axis is labeled 'Compliance'. The graph shows a positive linear relationship, with a line starting at the origin and extending upwards to the right.
